### EXAMINER'S AMENDMENT

1. Claims 1 and 10 are allowable. Claims 2, 4, 11 and 13, previously withdrawn from consideration as a result of a restriction requirement, require all the limitations of an allowable claim. Pursuant to the procedures set forth in MPEP § 821.04(a), **the restriction requirement between Species A and Species B, as set forth in the Office action mailed on 05/03/2007, is hereby withdrawn** and claims 2, 4, 11 and 13 hereby rejoined and fully examined for patentability under 37 CFR 1.104. In view of the withdrawal of the restriction requirement, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.
2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Carl Thomsen on 10/24/2008.

The application has been amended as follows:

Art Unit: 3724

-In the last line of claim 1, “the organism specimen.” has been changed to --the organism specimen; said slicing step occurring while said close roller is held in a fixed position.--.

-The following paragraph has been added after the last line of claim 10:--the device for manufacturing a tissue section further comprising means for fixing the close roller in position during slicing of the organism specimen.--.

3. The following is an examiner’s statement of reasons for allowance:

Claims 1 and 19 are allowable for setting forth a method for manufacturing a tissue section comprising the step of providing a close roller in a film running path and nearest to a slicing surface, wherein the close roller is moveable to and away from the slicing surface for adjusting the distance between the film running path and the slicing surface, and the close roller is held in a fixed position when a slicing step occurs.

Claims 10 and 20 are allowable for setting forth a device for manufacturing a tissue section comprising a close roller being positioned in a film running path and nearest to a slicing surface, wherein the close roller is moveable to and away from the slicing surface for adjusting the distance between the film running path and the slicing surface, and the close roller is held in a fixed position during slicing of the organism specimen.

For example, Pickett (3,733,948) teaches a method for manufacturing a tissue section comprising the step of providing a close roller 184 in a film running path 180 and nearest to a slicing surface. Pickett however, does not teach the close roller being

Art Unit: 3724

moveable to and away from the slicing surface for adjusting the distance between the film running path and the slicing surface.

Hisashi et al (JP2000-346,764), hereinafter Hisashi, teaches a method for manufacturing a tissue section comprising the step of providing a close roller 12 in a film running path 5 and nearest to a slicing surface 3a. Hisashi, however, does not teach the close roller 12 being held in a fixed position during slicing of the organism specimen.

Pickett (3,733,948) teaches a device for manufacturing a tissue section comprising a close roller 184 being positioned in a film running path 180 and nearest to a slicing surface. Pickett however, does not teach the close roller being moveable to and away from the slicing surface for adjusting the distance between the film running path and the slicing surface.

Hisashi et al (JP2000-346,764), hereinafter Hisashi, teaches a device for manufacturing a tissue section comprising a close roller 12 being positioned in a film running path 5 and nearest to a slicing surface 3a. Hisashi, however, does not teach the close roller 12 being held in a fixed position during slicing of the organism specimen.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
